QUERIES

PROBLEM STATEMENT

- With more than 100 colleges and more than 500 speakers and adjudicators, it becomes difficult to organize a debating tournament.
- There is a need for a platform to solve the problem of facilitating/managing the tournament, displaying participating institutions, Speakers, Adjudicators, and other relevant information.

INNOVATIVE IDEA

- The platform that we have caters to all these issues.
- The platform allows users to edit/update/delete/view the relevant information, the necessary and backend data is abstracted and can be viewed and edited by the admin(Organising Team) only.

FUTURE PROSPECTS

- We aim to produce a commercial application.
- Scalability: - Provide our services to other institutions through this platform.
- Premium: - Provide the essential features to everyone for free, including certain features restricted to premium membership.
- Features include:
 - A Draw generator.
 - A Private ID(URL) generator.
 - Accommodation of the CSV file to add data to the backend directly.

TECH STACK

- We have used MySQL to create a database, store data, edit/update/delete

MYSQL

- We have used Flask which is a python library to integrate the front-end with MySQL.

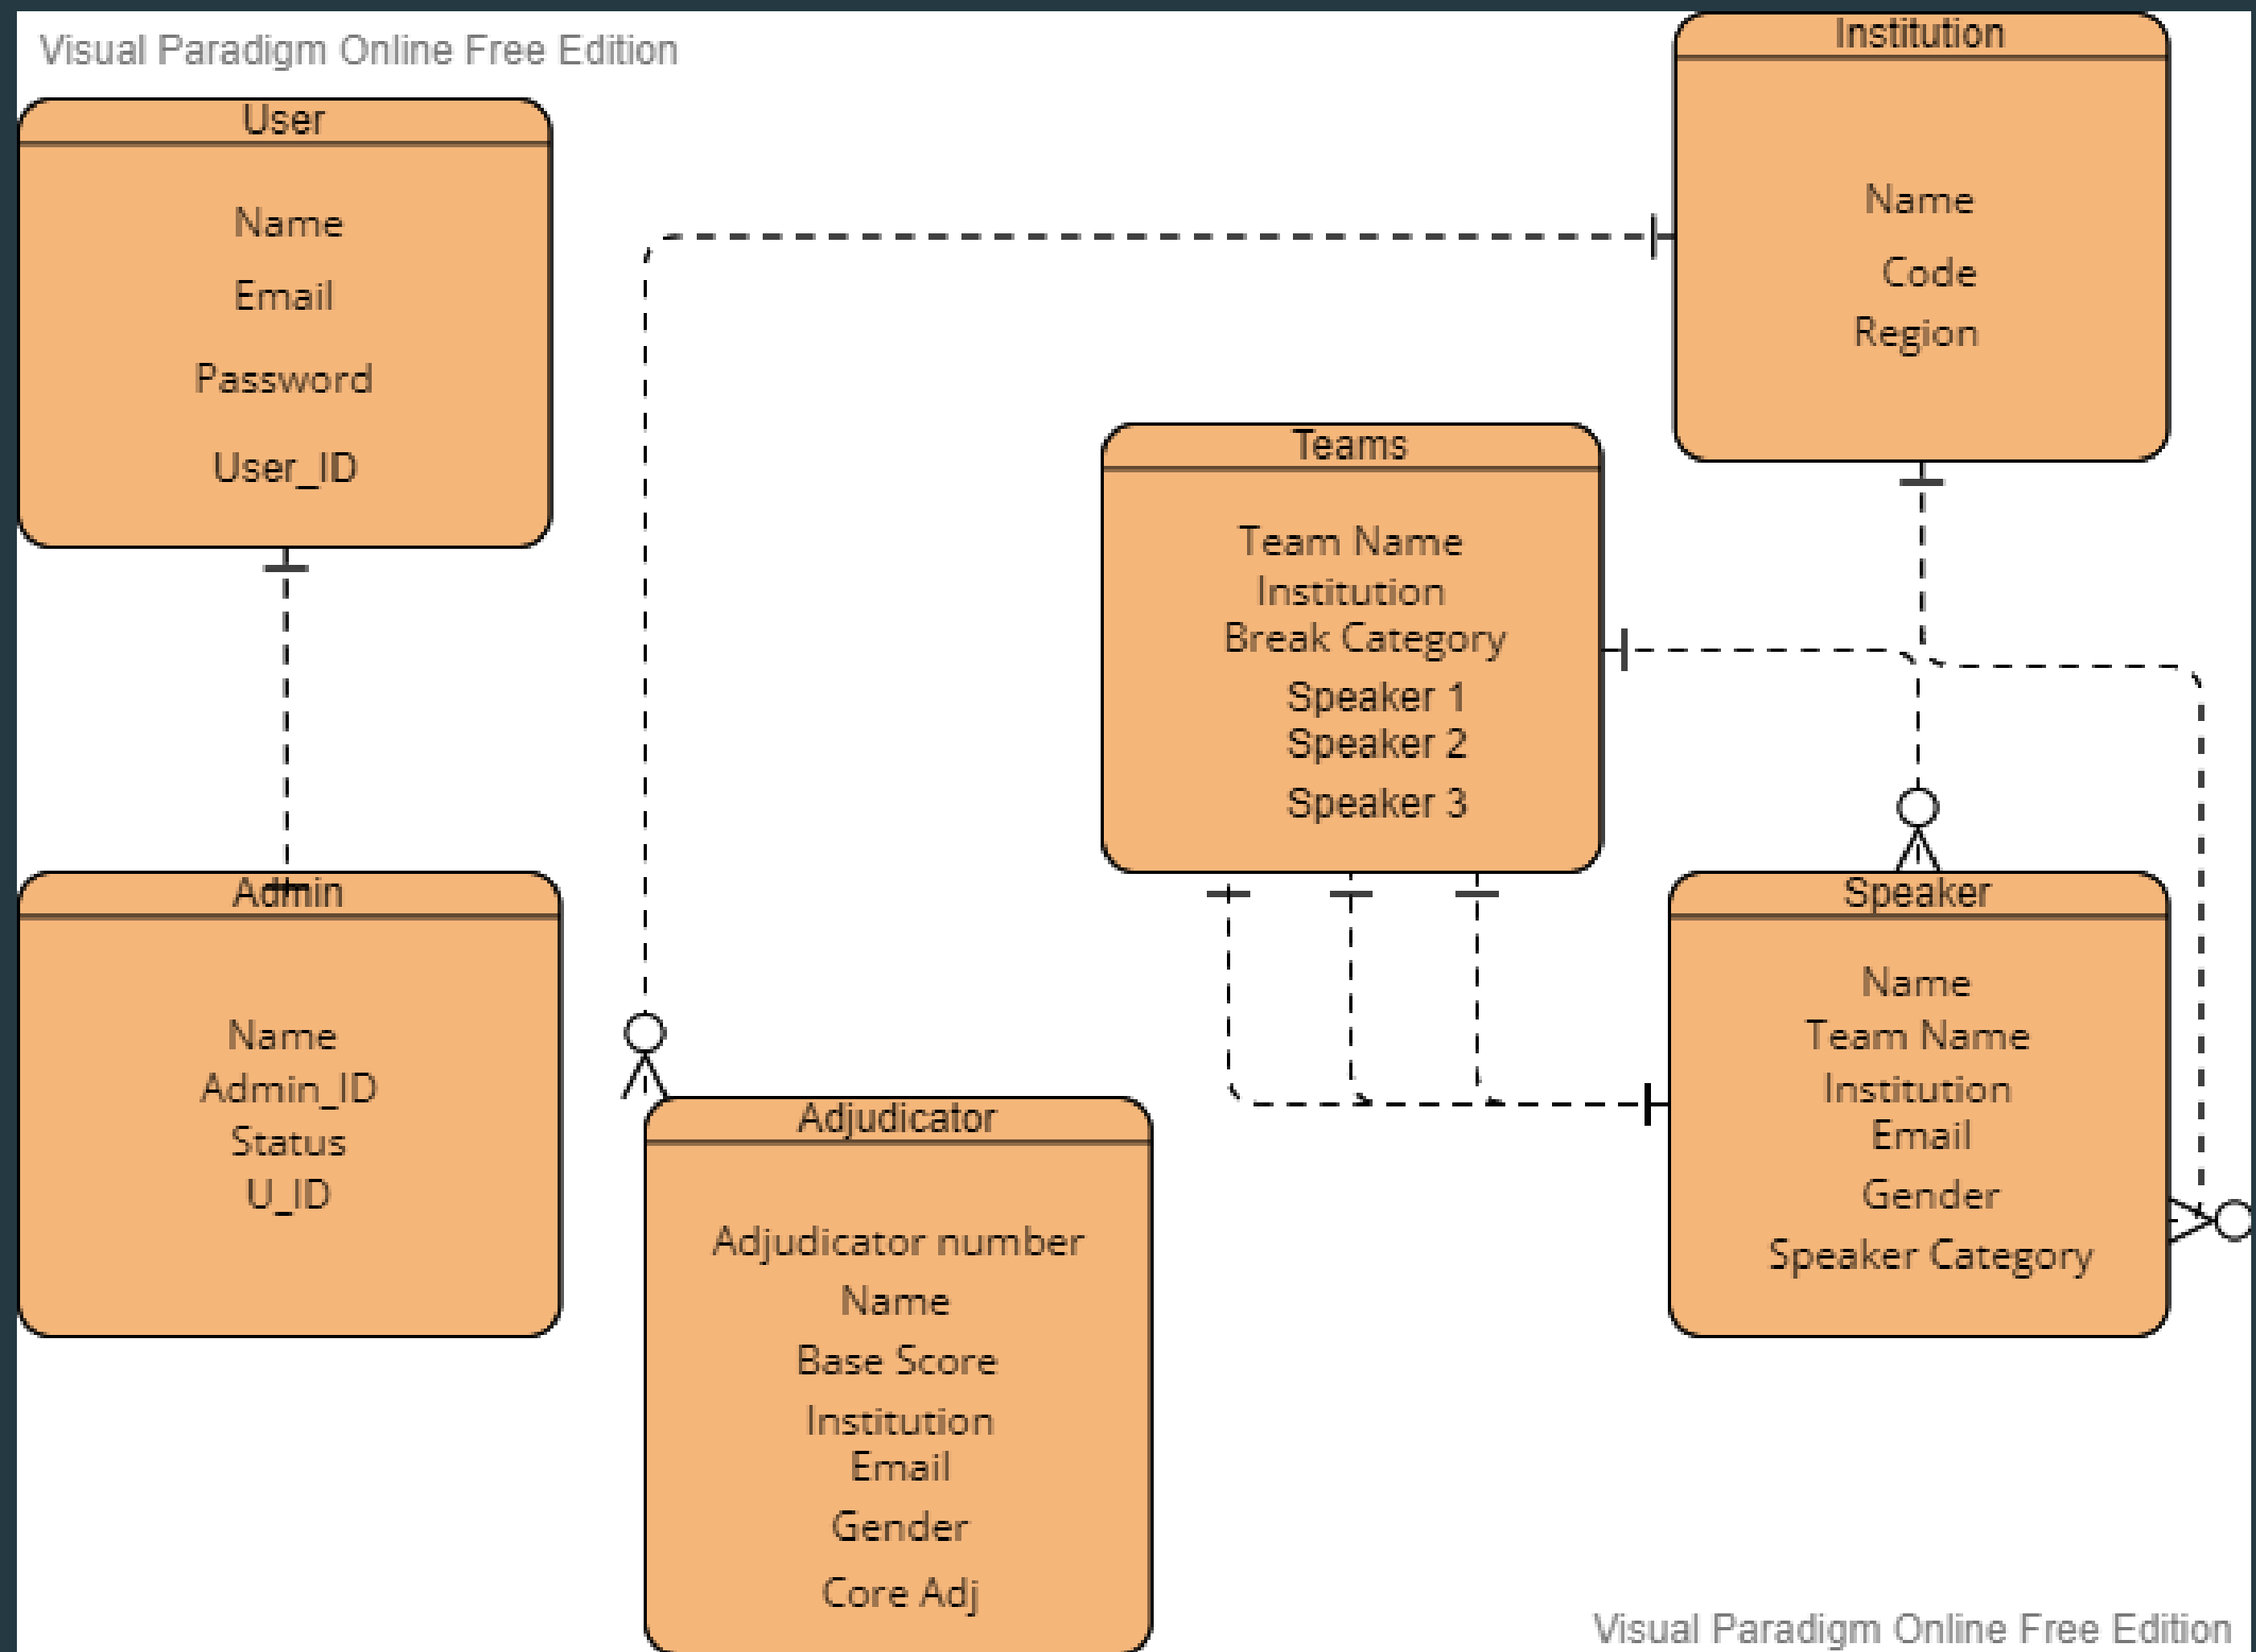

FLASK

- To create a user interface and allow users to edit/make changes to data and display data.
- We used HTML , JS , CSS

FRONT-END

E.R DIAGRAM

USERS

ATTRIBUTES

- User_ID (Primary Key)
- Name
- Email_ID
- Password

ADMIN

ATTRIBUTES

- Admin_ID (Primary Key)
- Name
- Status
- UID

SPEAKER

ADJUDICATOR

ATTRIBUTES

- Speaker Number
(Primary key)
- Name
- Team Name
- Institution
- Email
- Gender
- Speaker Category

ATTRIBUTES

- Adjudicator Number
(Primary Key)
- Name
- Base score
- Institution
- Email
- Gender
- Core Adjudicator

INSTITUTION

ATTRIBUTES

- Name
- Code (Primary Key)
- Region

TEAMS

ATTRIBUTES

- Team Name
- Institution
- Break Category
- Speaker 1
- Speaker 2
- Speaker 3

QUERIES USED

UPDATE, SET

The UPDATE statement is used to modify the existing records in a table.

JOIN

A JOIN clause is used to combine rows from two or more tables, based on a related column between them.

ORDER BY

The ORDER BY keyword is used to sort the result-set in ascending or descending order.

TRIGGERS

The ORDER BY keyword is used to sort the result-set in ascending or descending order.

VIEW

a view is a virtual table based on the result-set of an SQL statement.

ALTER TABLE

The ALTER TABLE statement is used to add, delete, or modify columns in an existing table.

CONSTRAINT

Constraints can be specified when the table is created with the CREATE TABLE statement, or after the table is created with the ALTER TABLE statement.

NOT NULL

The NOT NULL constraint enforces a column to NOT accept NULL values.

**AND MANY
MORE**

The background is a solid dark teal color. It is decorated with four stylized, light teal clouds. Each cloud has a thick black outline and contains several smaller, concentric spiral patterns. The clouds are positioned in the corners: top-left, top-right, bottom-left, and bottom-right.

**THANK YOU FOR
LISTENING!**
